- ➔ [AWS Certified Solutions Architect – Associate](#)
- ➔ [AWS Certified Cloud Practitioner](#)

PROJECTS

Nursery website

A website created for the Polish private nursery in the "hybrid" app model. Django is being used to serve the React application and provide frontend data through the REST framework. Data are saved in Heroku's PostgreSQL database. Gallery images are fetched from AWS S3. Thanks to Django, the user can easily change almost every aspect of the website through the admin panel.

Wantaki

Very useful app if you are tired of receiving missed gifts. Create a list of items you want to get, and then share it with the world! Simple as that ;). Collection of items and other theme colors implemented. Technologies used: React, Redux, Firebase.

My portfolio

A project which I started after finishing React course. My own portfolio which I couldn't wait to finish and I'm very proud of. I've used Gatsby, a static site generator, to make my portfolio really fast. Data are read from markdown files so the next projects could be added in seconds.

ACHIEVEMENTS

AWS articles

Various AWS tutorials created throughout my career. Next articles in progress.
